6 Outer Parts	0066340-200-06-32Y

Foreword

Thank you for purchasing our product. We will try our best to provide you with satisfactory and excellent service.

ZOOMLION crawler crane is a product integrating our many years' experience and advanced technologies. This catalog introduces the structure and assembling features of spare parts as well as the outer parts required in the main systems.

Carefully reading this spare parts catalog will save your repair and ordering time.

Using this spare parts catalog:

- I makes it easier to become familiar with the crane
- I avoids problems due to improper assembly and dismantling
- I extends the service life of your crane
- I reduces repair cost and downtime

1. How to use this catalog

- (1) This spare parts catalog includes 6 chapters: complete vehicle, boom system, power system, slewing table, undercarriage and outer parts. The chapter summary at the beginning of the catalog provides a quick overview and the table of contents at every beginning of the chapter shows how the individual chapter is structured;
- (2) This catalog also covers the description of main outer parts which are individually sorted in chapter "outer parts"; and those outer parts with detailed information are highlighted in grey in the texts;
- (3) How to find the marked information of the spare parts you needed. First you should find out in which chapter the information of the required spare parts is described by looking for the chapter summary, and then glance through the table of contents at the beginning of the desired chapter;
- (4) Flick through the pages until the page numbers of the spare part are found. And the spare parts code, description, specification and quantity can be referred in the text.

2. Relevant instructions

- (1) The number and description in the top right-hand corner of the text / picture indicate the component page number and chapter's name. The component page number consists of code no. and picture / text page number. For detailed information, refer to examples 1 and 2;

Example 1:

We code hydraulic tank "300". If the hydraulic tank offers 2 pictures and 1 text, its first picture page number is coded into "300-1", second picture page number "300-2" and first text page number "300-3".

Example 2:

We code "Main boom pivot section" (secondary component) into "010020", so its first page number is coded into "010020-1" and second page number "010020-2".

- (2) We have sorted all purchased spare parts in our method. For detailed information, refer to example 3;

Example 3:

If we code one purchased engine "1000000025" and use its first 5 figures as its abbreviation, its first page number is coded into "10000-1".

- (3) We have coded our suppliers (stamped on the parts), and you can refer to the page number according to the supplier code in the contents to find out the information of purchased spare

parts needed;

- (4) The catalog is made up of individual, serially numbered chapters. And the page number is located in the bottom middle part of each page. You can look through this catalog according to these page numbers.

Declaration

Our products and technical documents are subject to technical improvements and changes without notice. Therefore, please acquaint yourself with our updated technology information. If there are differences between illustration and product, refer to the product.
